

Dear Grand View Parents,

Welcome back! For those that are new to Grand View, a quick introduction. I am Paki Wolfe and manage our [Makerspace program](#). Makerspace is a hands-on, student-directed learning experience, where students see themselves as inventors, builders and creators.

Over the summer, I missed the energy and creativity that your children exude in my classroom. I am sorry that summer has to come to an end, but am very eager to see my little friends again! I also look forward to seeing my parent volunteers. A few notes:

- Schedule is up and running! [Sign-up](#) to volunteer in your child's class here
 - Volunteers are also needed to help with sorting and organizing materials. Just stop by the Makerspace classroom any time to help.
- Open door policy! You are welcome to volunteer *anytime* regardless if you signed up
- [Recyclables](#) are needed this fall
 - Please do not donate other items right now; check back for a winter donation list. Please CLEAN ALL ITEMS. You can place in green bins in the front office or outside the Makerspace classroom - D3.
- Check out these fun and easy [at home projects](#)
- Visit the [Makerspace website](#) periodically for updates on our recyclable wish list, at home projects, and other resources

Looking forward to a great year!

Paki Wolfe

PLEASE CLEAN ALL ITEMS

PLACE IN GREEN BINS in the front office or outside the Makerspace classroom - D3

MAKERSPACE DONATION WISH LIST

Fall of 2019

AT HOME PROJECTS

NEWSPAPER TUBES

Spread out 3 double pages of the newspaper
(1 page works, but is not as strong)

Fold over a corner

Turn over the smallest fold you can and
press it flat

Continue to roll and press as tightly as you
can for 15 rolls. Don't let go!
Your roll will loosen if you do

When you are halfway across the paper,
you can use your palms to make your rolling
faster.
Don't let go whatever you do!

Keep rolling until you reach the other side

Use a small piece of tape to stick the last
corner down

Find the weakest point at the ends of the
roll by bending up the ends

Snip off the ends at the weak point

Attaching...
